

## Introduction

This is a web application. The objective of the project is to showcase all the arts made by different around the world. Our main aim is to provide a platform, where one can view all the different types of arts created by different artist. This project will help others to gain information about the various trending arts and place order according to their need. One can also view the prices of the various items. Our purpose of selecting this topic is that artist creates different types of art but they don't find a proper platform to show their creativity to the world. Here they can show their creativity to the world. This was our main motivation behind the development of our project online Gallery.

## Objective

Art of the Artists helps the user to view images available on website, from here user can select their images and they can contact us if they want by the images. All information related to every image is also available on the website. Our project is being created with the front end as PHP and back end as MY SQL. The project now is in the starting stage of development. The user can check the products and choose the right one for them. This is the main objective of the project. By getting this project done the user can access the arts products at their fingertips.

### ● Project Scope

- ◆ This system will be available on an online platform for 24\*7 access to the people(users) and the administration.
- ◆ This system will support online uploading and sharing of photos.
- ◆ This system will support online sharing of views and comments.

## Client Side Requirement Specification Hardware and Software Requirement:

### ● Hardware Requirement

- ◆ Processor :- I3 5TH GEN 2.2 GHZ, 64 BIT PROCESSOR
- ◆ Ram :- 4GB RAM

- Software Requirement

- ◆ Operating system :- Windows,Linux,macOS
- ◆ Internet Connection
- ◆ Any Internet Browser (Chrome,IE,FireFox)

- Future Scope of Improvements

- ◆ People can like photos shared by himself / herself or others.
- ◆ People can tag other friends in their shared photos.
- ◆ People can add emoticons or stickers in the comment sections.
- ◆ People can sort their shared photos by date, month and year.
- ◆ People can report to administration for abusive photos shared by others.
- ◆ People can delete their photos also after sharing.
