

# THE TOUR GUIDE

## 1. OVERVIEW:

The Tour Guide is a java based website that helps the tourists in planning their tour of a completely anonymous place he/she wants to explore.

This website is very useful to all the people who love to travel in planning time efficient trips where he or she can save time to visit new places rather than getting lost in an unaware place.

## 2. OBJECTIVE:

- To find Tour Places, enter their start and end point.
- To enable destinations to publish their location and find good places.

## 3. ADVANTAGES:

- Registered users get the recommendation of the places of their preferences.
- They can find the places using this system.
- Users can easily view the place on map with its description, image and address.
- The system is robust and secure in nature.

## 4. DISADVANTAGES:

- It may provide inaccurate results if data entered incorrectly.
- Connectivity is a must.

# THE TOUR GUIDE

## 5. PROPOSED AND EXISTING COMPARISON:

For people who want the trip planned entirely, who don't want to use the filtering method of a pen and paper or trace filtering tour guide helps them completely.

The website like Trip advisor shows only the places to visit in a city but not with an appropriate plan. Some other existing websites like Inspirock, Make My Trip show the plan on its own basis but not with customer's priority. The tour guide shows the best plan that matches with your interest in places to visit in a city.

## 6. SOFTWARE REQUIREMENTS:

- IDE/Text Editor: Visual Studio Code / Sublime
- Front End: HTML5, CSS3
- Browser: Google Chrome or Mozilla Firefox
- Operating System: Windows, Ubuntu
