

School Website

Overview

As technology continues to advance, information's disseminates easily with no hassles and it has been a common part of our everyday needs in this world. Rapid advances in technology have helped to meet these demands of the society.

The success of the school in carrying out its primary charge of educating and socializing students is contingent on student's awareness in the school. Nowadays, most educators find it easy to have a website in their school not just because they can access it through online but of course it promotes the school and a strong home-school connection.

Objective

The study aimed to analyze, to design, to develop, to test, and to implement with an effective and useful school website, specifically this is intended to:

1. The students are updated on what may happen in their school.
2. Let the visitors be able to know some information about the school.
3. The parents can also be updated even without visiting the school premises.

Students may no longer depend on the bulletin board just to know the events

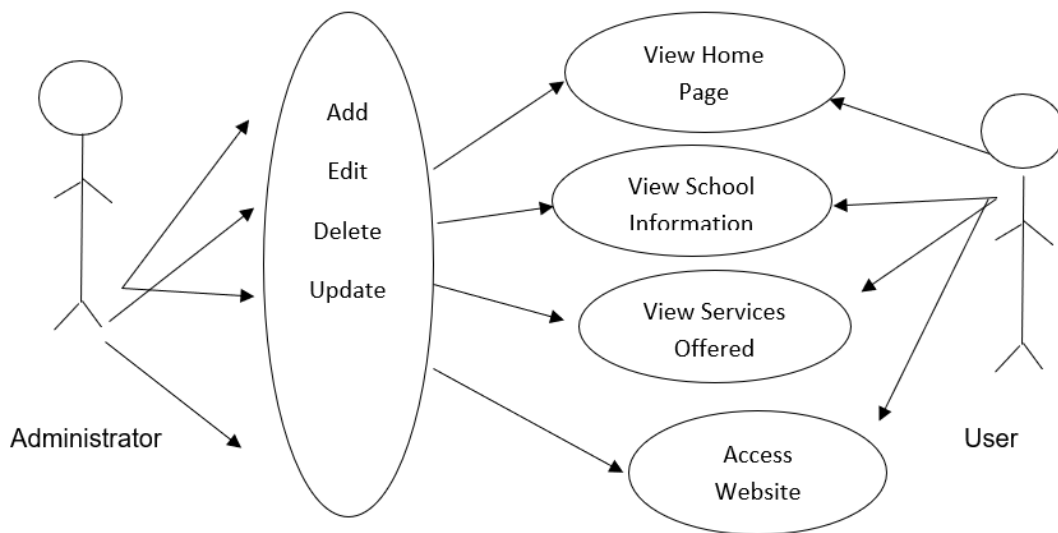

System Users

1. Administrator
2. User

Admin's point of view

- **Add-** The admin can add on the database.
- **Edit-** The admin can also edit anything that is in the database in this section.
- **Delete-** If the company wants to delete some of the added information in the database, he/she can do it in this section.

System Use Case

Software requirements

- | | |
|------------|---------------------------|
| •IDE | : Visual Studio Code |
| •Front End | : HTML5, CSS3, JavaScript |
| •Database | :MySQL |
