INTRODUCTION

INTRODUCTION

1.1) PROJECT PROFILE :

This website is a online real estate sale business website through which a user can access its information and manage all the adding, updating, deleting the assets and some of its tasks.

The Admin user can change the update the information regarding property selling , cancellation. The system is very useful for the companies who development apartment, hotels, villa, residential properties and commercial properties. Company or individual agents   can also advertise their property.

1.2) Existing System and Need for System

EXISTING SYSTEM :

This is an era of computer and information technology. In this era, if you want to exist in the market, you have to use computer and information to provide best services to the customer. Real Estate is the business of buying, selling, and renting land, buildings, and offices. Every person wants his house should be best in a location with all facilities. Offices should be near to market and product unit near to raw material and marketplace. General companies concentrate on its product and infrastructure are bought from Real Estate company. Due to competition in this industry, every real estate company wants to deliver the best service and makes its customer satisfied. Online Property Management System is a software which takes care of everything that a real estate want to do. Property Management System is developed for real estate Companies .It is very strong and easy to use that makes quick booking and account handling process. The real estate Property management system is a web-based software and you can access it from anywhere. This ensures the service to client 24X7. Clients can view and book their favourite property online just after few clicks. They can also pay the money online and get bills online.

This project is developed for 'online property sale' to manage the

 understood to easily .

Its helpful to every to manage work and its user friendly

1.3) Scope of System

Real Estate website have a wide scope in feature because Real Estate field growing fastly many Gov. and Residential Projects lunched in India. Real Estate website is a way or a platform for helping people searching Property in any state or any ware. they provide much information as you need. If you need a

apartments firstly you search on web. if you want to sell your property then Real estate portal or website help you for selling, On my opinion the Scope of real estate website is very bright.

1.4) Operating Environment – Hardware and Software
