INSURENCE
WEBSITE

1.Introduction:-

Online Insurance management system is a web application which is developed for tracking the details of the insurance policy, customer details and company details. This web site is an online insurance Analysis and information management system that provides easy access of information regarding the people and resources of insurance. User can view their own personal details when login into the Policy Holder module. This project is useful for any kind of insurance company to manage the insurance details, to sanctioned the insurance for customer, process the insurance policy details and all kind of insurance process through online. The Insurance management system is a complete solution for organizations, which need to manage insurance for their vehicles, equipment, buildings, and other resources

2. Existing insurance management system:-

The existing system is the manual system. The manual system is prone to error. It is time consuming. It is difficult to search for a data Most of the insurance organizations are not having any existing fully computerized system. It is very difficult for a person to produce the report. There are chances for changing the scheme report and do malpractice. they are managing the information in the form of Excel spread sheets. This system involves a lot of manual entries with the applications to perform the desired task. Every member organization has its own data structure. Usage of papers in the payment process leads to less efficiency, less accuracy and less productivity. Due to lack of centralized data structure, it is very difficult to merge the data to analyze the statistics

3. Proposed insurance management system:-

The proposed system is for making easier to manage policy holder details, agent details, policy details, claimant details and payment details. The proposed system is designed to eliminate the drawbacks of the existing system. It is designed by keeping to eliminate the drawbacks of the present system in order to provide a permanent solution to the problems. The primary aim of the new system is to speedup transactions. This insurance management system will be developed for managing the insurance management system. The overall system is control through the main menu. The report is prepared for the schemes and implemented by the concerned officials.
